

Figure 1B analogue: LFP power spectral density overlaid across the five depths

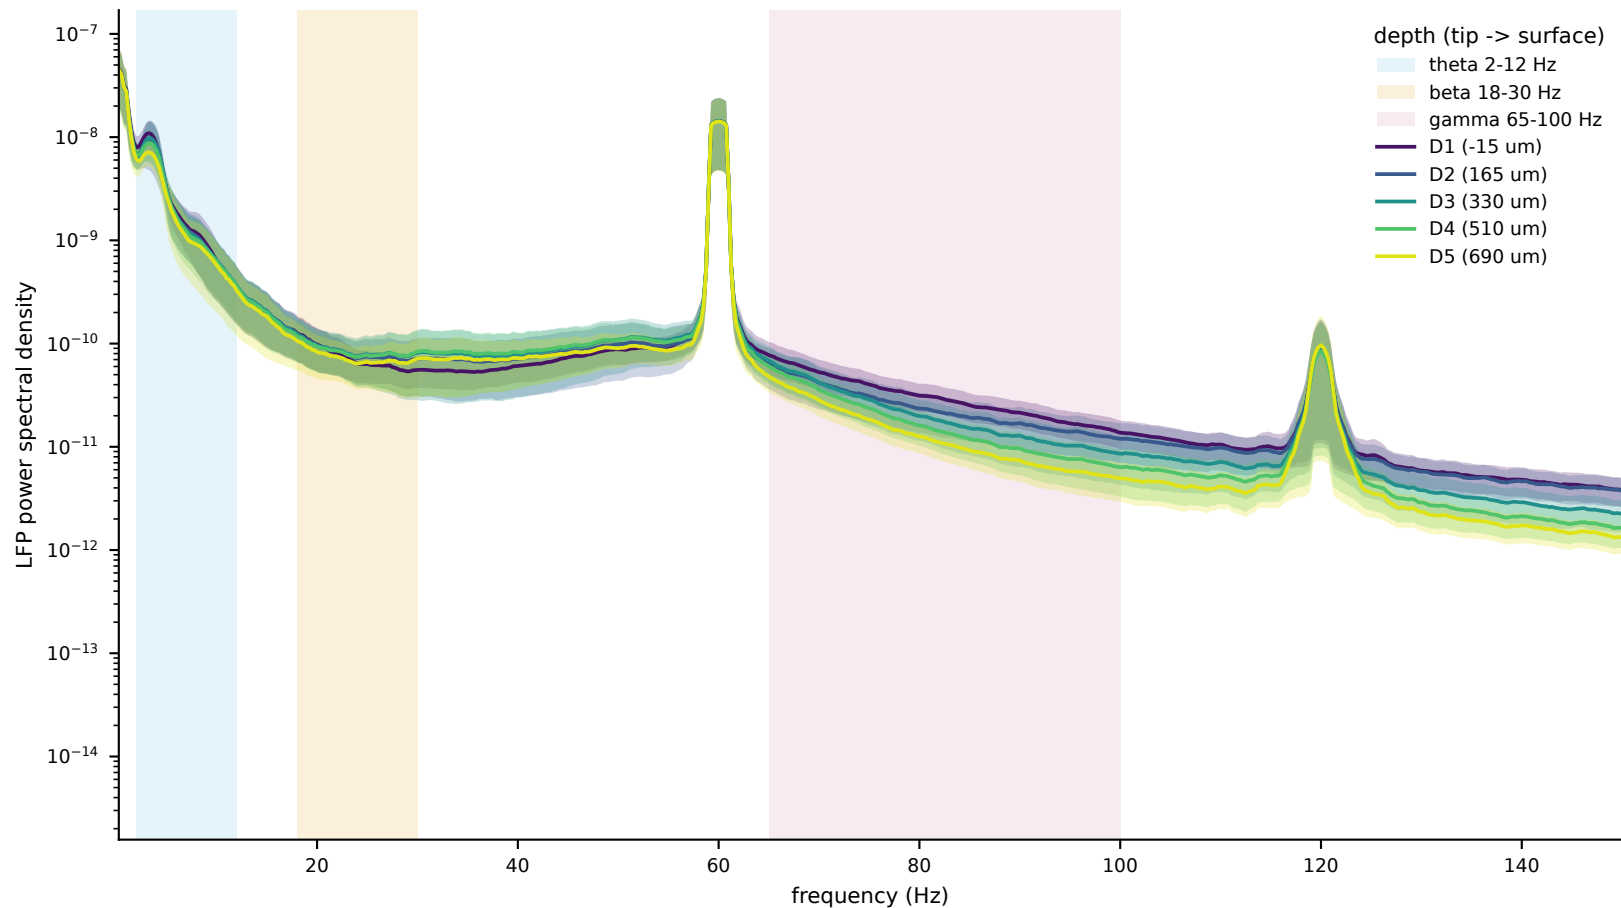

Figure 1B analogue: LFP power spectral density overlaid across the five depths (grand mean $\pm$ SEM across $n_{\text{experiments}}=5$ animals). Band definitions marked: theta 2-12 Hz, beta 18-30 Hz, gamma 65-100 Hz. Depth ordinals 1-5 (tip -> surface), legend states channel ycoord (μ m). Frequency axis cropped to 0.25-150 Hz for display; underlying data extend to 500 Hz (Nyquist).
