

Figure 1D analogue: instantaneous sniff-rate distribution (control epochs)

— median IQR (Q1-Q3)

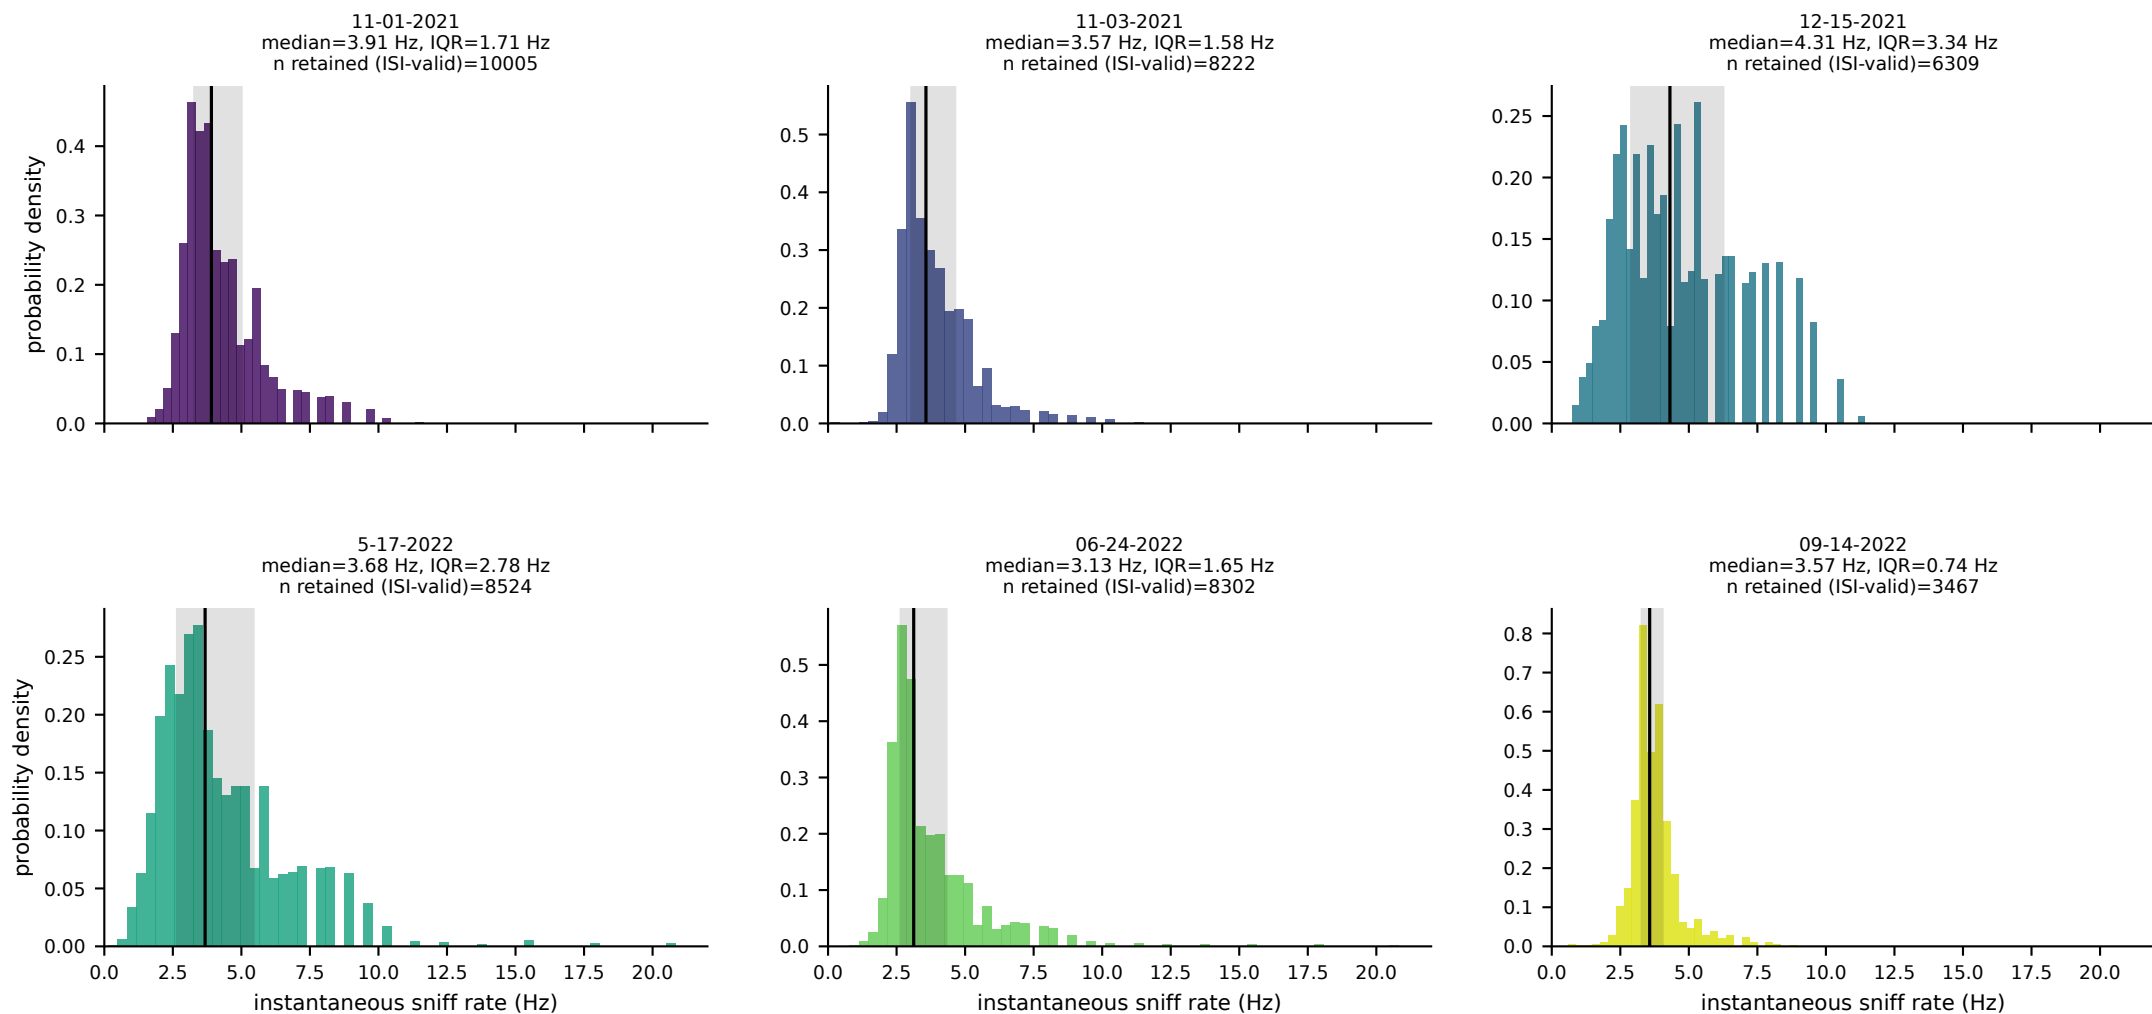

Figure 1D analogue: instantaneous sniff-rate distribution (control epochs), per experiment. Control-epochs-only restriction applied (ethanol-contact epochs excluded); distribution shown is UNTRIMMED (not filtered by the ISI 5th/95th-percentile trim mask that additionally gates the coherence-analysis windows), matching the median/IQR values annotated per panel (injected from RESULT-sniff-rate.yaml). n_sniffs retained (ISI-valid, coherence-analysis mask) annotated per panel from RESULT-qc-counts.yaml.
