

Figure 1A analogue: example band-filtered LFP + sniff traces (per depth)

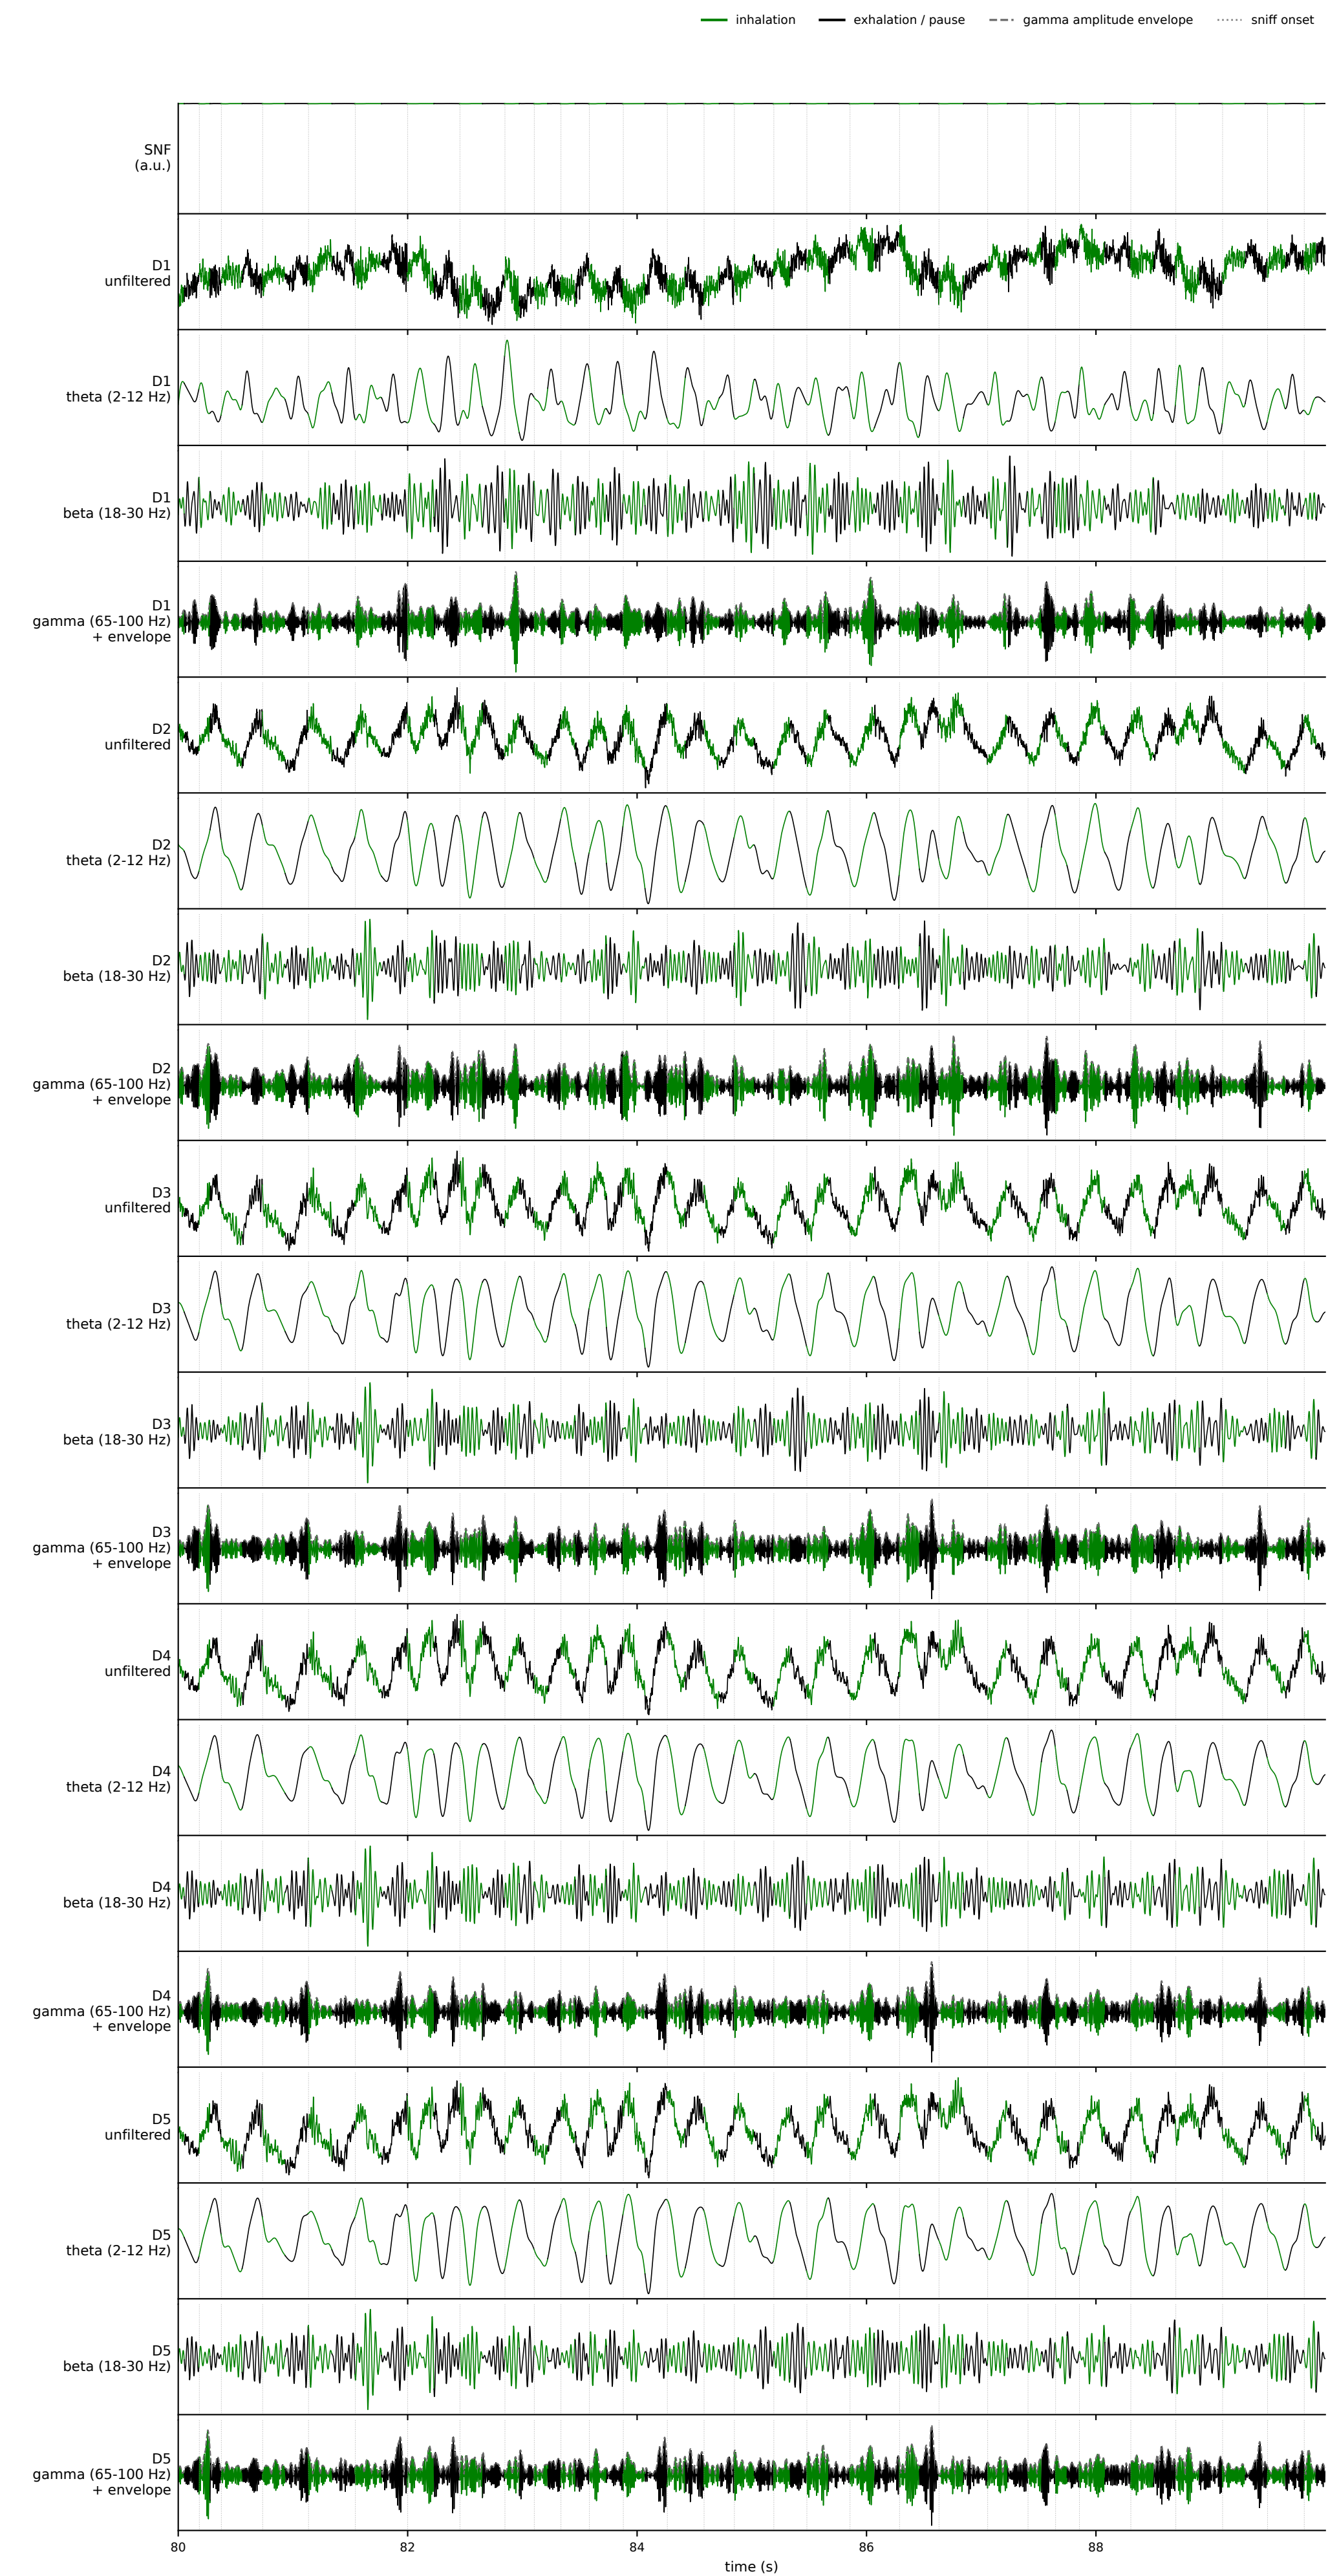

Figure 1A analogue: example band-filtered LFP + sniff traces (per depth).
Representative experiment: session 06-24-2022; segment window 80.0-90.0 s (chosen by fixed display convention: session with the most retained all-control/all-valid-sniff 4-s windows, tie-break earliest date; segment = first qualifying contiguous control-valid span of fixed length 10.0 s; non-scientific, presentation-only choice).
Depth channels shown: D1=ch0 (-15 μ m), D2=ch24 (165 μ m), D3=ch46 (330 μ m), D4=ch118 (510 μ m), D5=ch142 (690 μ m).
Bands: theta 2-12 Hz, beta 18-30 Hz, gamma 65-100 Hz + amplitude envelope; inhalation = green, exhalation/pause = black; sniff-onset times marked (dotted gray).
